

Pragya Sharma

PHD CANDIDATE · ELECTRICAL AND COMPUTER ENGINEERING

☎ (+1) 607-379-1228 | ✉ ps847@cornell.edu | 📧 psharma15 | 📱 pragyasharma15 | 🏠 405 Lake Street, Apt. A11, Ithaca, NY 14850

Objective

I am an international student, presently on F1 visa with three years of OPT after Ph.D., looking for work opportunities in the field of data analysis, algorithm development, biomedical electronics and wireless system applications in the Northeast region.

Education

Cornell University

Ithaca, NY 14853

PHD CANDIDATE

ELECTRICAL AND COMPUTER ENGINEERING (GPA: 4.06)

August 2015 - Expected May 2020

ADVISOR: Prof. Edwin C. Kan

THESIS: RF Sensor Systems for Indoor People Tracking and Cardiopulmonary Monitoring.

Indian Institute of Technology (IIT), Kharagpur

Kharagpur, WB 721302

BACHELORS IN TECHNOLOGY

ELECTRICAL ENGINEERING (GPA: 9.34/10)

2011 - 2015

Projects

Indoor Imaging from RFID Tag Backscatter for Real-Time People Tracking

Cornell University

PROFS. EDWIN KAN, AND DAVID HYSELL

January 2016 - Present

- Implemented novel sparsity-based OMP and FISTA reconstruction algorithms for high resolution RF imaging, using untagged-object backscattered phase from ambient low-cost passive UHF RFID tags.
- Developed simulation study in CST Microwave Studio to compare relative tag-receiver placement and algorithm performance.
- Designed a noise-cancelling calibration algorithm to mitigate backscattered phase offsets from direct tag-to-receiver LOS, background object multipath, and receiver cables and circuits introduced phase for improved size and location estimation.
- Developed ensemble algorithms to improve the performance and reduce parameter sensitivity for inverse methods with limited bandwidth and spatial diversity.
- Implemented convex optimization and level-set approaches to extract object shape and size from the pixel reflectivity of imaging domain.
- Developed an optimal frequency selection algorithm for a broad bandwidth, multi-frequency setup to generate improved Fourier-reconstructed image based on improved sampling in the K-space.
- Tested super-resolution imaging based Capon and maximum entropy algorithms, which provided improved performance over matched-filtering for shape estimation with increased computational and time complexity.

Respiratory Pattern Monitoring with RF Near-Field Coherent Sensing (NCS)

Cornell University

PROF. EDWIN KAN

August 2016 - Present

- Developed a real-time over-clothing cardiopulmonary sensor by a software-defined radio to collect detailed respiratory and heartbeat waveforms. Designed and implemented a testing protocol to perform human study (N = 30) on simulated breathing disorders and apnea.
- Implemented a nearly tuning-free peak-detection algorithm to identify respiratory disorder with broad frequency range of 2-40 breaths per minute (BPM), which achieved high rate accuracy of **94.8%** (RMSE: 2.9 BPM) and respiratory volume accuracy of **77.5%** (RMSE: 0.11 L) under simulated deep, fast and central sleep apnea conditions.

- Designed a semi-supervised support-vector machine (SVM) outlier-classification algorithm to detect motion artifacts with an accuracy of **91%**.
- Designed and implemented a bed-integrated sensor for sleep apnea detection in collaboration with Cornell Weill medical sleep center. The sensor is invisible to the user with improved antenna design and placement to measure separate thorax and abdomen motion.
- Programmed an attention test protocol on PsyToolkit for a large-scale human study to evaluate stress/attention using both respiratory and heartbeat characteristics from the NCS sensor.

Accuracy and Resources Trade-off in Machine Learning Algorithms

Cornell University

COURSE: CS 6780 ADVANCED MACHINE LEARNING

January - May 2019

- Developed approximation techniques to tackle constrained-resource issues with large training data and limited CPU, memory and energy availability, specifically in mobile devices.
- Studied accuracy vs resource trade-off with different approximation techniques at both training and inference in machine learning algorithms including regression, neural networks and SVM.

Online Trainable Near-Field Communication (NFC) Reader

Maxim Integrated

INTERNSHIP: HARRY HUANG, MICROS, SECURITY & SOFTWARE BUSINESS UNIT

May - August 2017

- Programmed an NFC reader model including analog frontend and digital baseband processing in Python. Implemented new modulation protocols on output of the existing hardware to predict future challenges.
- Developed intelligent multi-class classification algorithm using a simple neural network architecture to perform digital data demodulation, which achieved low test error of **1%** for optimal conditions, and **11%** with low coupling efficiency and high noise.
- Implemented a real-time trainable setup for testing the experimental data from the reader, resulting in low test error of **< 2%**.

Low-Voltage Arc Detection and Sensor Placement

IIT Kharagpur

PROF. AUROBINDA ROUSTRAY

May 2014 - April 2015

- Developed an algorithm for low-voltage (230 V, 50 Hz) arc characterization and classification from other spikes using k-means clustering of PSD spectral distance measurements, achieving high accuracy **> 96%**.
- Developed an algorithm to estimate optimal sensor number and location for arc detection using bipartite graph approach with high accuracy, which achieved cost reduction by **24.75%** in smaller electrical networks.

Awards

2015	George W. Holbrook Jr.'52 , Graduate Research Award.	<i>Cornell University</i>
2015	Best signal processing project award , in Department of Electrical Engineering.	<i>IIT Kharagpur</i>
2011	Inspire Scholarship , among top 2% candidates in IIT Joint Entrance Examination (0.45 million applicants).	<i>IIT Kharagpur</i>
2011	Certificate of Merit in Chemistry , for being among top 0.1% candidates in Chemistry in All India Senior School Certificate Examination (12 th grade).	<i>Delhi</i>
2009	Indian Prime Minister's Guest , at Republic Day parade, awarded to top 4 candidates in All India Secondary School Certificate Examination (10 th grade), with 97.80% score.	<i>Delhi</i>

Teaching Experience

ECE 4960 , <i>Scientific and Numerical Computation</i> , Teaching Assistant.	<i>Spring 2018</i>
ECE 4880 , <i>Radio Frequency Systems</i> , assisted lab development and headed sessions.	<i>Fall 2016</i>

Technical Skills

Programming: MATLAB, Python, C, C++.

Tools: CST Microwave Studio, LabVIEW.

Relevant Courses

Wireless and RF System: RF Systems, Wireless Communications, Advanced High Speed and RF Integrated Circuits.

Algorithms and Data Processing: Inverse Methods in Natural Sciences, Scientific and Numerical Computation, Advanced Machine Learning, Digital Signal Processing, Digital Image Processing.
